

TTR2795

Fully Automated Three Phase Transformer Turns Ratio Meter

■ The TTR 2795 measures transformer turns ratio to the greatest accuracy across the widest ranges of ratios in the industry. Measuring turns or voltage ratio can detect faulty transformer windings and defective tap changer positions. The excitation current and phase angle between the primary and secondary windings also provides additional information regarding the winding condition. The TTR 2795 is supplied with application software that guides the user through the measurements and generating test reports quickly and easily. The TTR 2795 is ideal for acceptance testing and on-site maintenance testing according to IEEE, IEC, and ANSI standards.
